

AIDAR KASIMOV

Software Engineer · JavaScript / TypeScript · Web Apps / Automation · 8+ years

aidarkdev@gmail.com | Telegram: @ai_dark_dev | github.com/aidarkdev | Bishkek, Kyrgyzstan (UTC+6) · Open to full remote

PROFILE

Software Engineer with 8+ years building production-grade web applications, complex SPAs, SSR interfaces, automation tools and developer workflows. Strong in JavaScript/TypeScript across browser and Node.js environments, the React ecosystem, application architecture, API integration, performance optimization and large-scale codebases. Built high-traffic search and booking flows at Tutu.ru and complex reporting systems used by thousands of businesses. Comfortable owning product and engineering work end-to-end: requirements, architecture, implementation, review, testing and release.

SELECTED ACHIEVEMENTS

- Built and maintained high-traffic product flows at Tutu.ru across trains, flights, buses and hotels.
- Developed complex web application modules for e-reporting SaaS used by thousands of businesses for tax and pension submissions.
- Built the FTS VAT / PFR report reconciliation service from scratch - a data-intensive workflow for accountants.

EXPERIENCE

Software Engineer | Freelance / Outsource

Apr 2025 - Present

- Delivering full-cycle engineering work for contract clients: requirements clarification, application implementation, API integration, review and release support.
- Building AI-assisted automation tools and developer workflows using LLM agents to reduce repetitive engineering tasks.
- Building vidium, a zero-dependency full-stack JavaScript app with SQLite that mirrors YouTube channels with on-demand video download.

Developer | Strong Team

Apr 2024 - Apr 2025

- Developed internal infrastructure services used across multiple product teams.
- Delivered outsourced web application projects end-to-end: architecture, implementation, code review and CI integration.
- Improved build pipeline reliability by maintaining a CI-integrated codebase and stabilizing release workflow.

Jun 2023 - Apr 2024 · Sabbatical — relocation to Kyrgyzstan, personal projects and skill development.

Client Application Developer | Tutu.ru

Oct 2021 - Jun 2023

- Built and maintained SSR search, result and booking web flows for trains, flights, buses and hotels on a platform used by millions of monthly users.
- Owned React/TypeScript UI changes for filtering, sorting, search-result UX and booking-flow iterations.
- Worked in a large React, Redux-Saga, TypeScript and SSR/isomorphic rendering codebase; participated in sprint planning, architecture discussions and code review.

Senior Frontend Developer | Ai-Novus

May 2021 - Oct 2021

- Contributed to development and maintenance of the N2O open-source UI framework.
- Built form-heavy B2G product workflows for government clients with focus on accessibility, data entry and reliability.

Jun 2019 - May 2021 · Freelance projects and React ecosystem transition.

JavaScript Developer | Tensor

Sep 2013 - Jun 2019

- Core developer for an e-reporting SaaS platform used by thousands of businesses for tax and pension fund submissions (FTS, PFR, FMS).
- Architected and delivered multiple SPA modules; the main service was a full SPA, while legacy report flows worked as standalone SPA sub-applications.
- Built the FTS VAT / PFR report reconciliation service from scratch - a complex data-intensive accounting tool.
- Worked within an in-house framework comparable in complexity to React + custom state management; strong foundation in JavaScript architecture patterns.
- Team of ~10 engineers; active code review and mentoring junior developers.

PROJECTS

vidium - YouTube channel mirror with on-demand video delivery

- Platform that mirrors YouTube channels: videos are presented as a catalogue by default; actual download happens only on explicit user request.
- Stack: zero-dependency vanilla JS across client and server, SQLite - deliberately lightweight, fast UI, no build step.
- PWA-capable; live demo: <https://paguo.lol/> · github.com/aidarkdev/vidium

SKILLS

Core	JavaScript (ES2022+) · TypeScript · React · React Hooks · Redux / Redux-Saga · Next.js · Vue 3
Application engineering	SPA architecture · SSR/isomorphic rendering · API integration · Performance optimization · Accessibility · Responsive UI
Styling	CSS3 · Sass/Less · Tailwind CSS · Cross-browser layout
Testing	Jest · React Testing Library
Server-side/Tools	Node.js · Express.js · PHP · Python · WebSocket · REST · Git · Linux · CI/CD
Familiar with	jQuery · Bootstrap · GraphQL basics · Docker basics
Practices	Code review · Refactoring · Legacy codebases · Agile/Scrum · Mentoring

EDUCATION

Master's - Control in Technical Systems KNRTU-KAI named after A.N. Tupolev, Kazan	2014
Bachelor's - Software Engineering for Computing and Automated Systems KNRTU-KAI named after A.N. Tupolev, Kazan	2012

LANGUAGES

Russian - Native · English - Professional working proficiency (B2)
